STATISTICAL SERVICE

## In this release, we present:

- Definition and Measurement of the Producer Price Index (PPI)
- Producer Price Index and Producer Inflation for October 2023
- Disaggregation of the October 2023 Producer Inflation
- Highlights of October 2023 Producer Inflation

# Definition and Measurement of PPI and Inflation (1/2)

- The Producer Price Index (PPI) measures the average change over time in the selling prices of goods and services as received by domestic producers.
- Price collected for the computation of PPI are known as factory gate prices, which are the prices firms assign to their products.
- These prices exclude sales and excise taxes, government subsidies other costs incurred by other intermediaries and consumers
- The rate of Producer Inflation is the relative change in PPI between periods

# Definition and Measurement of PPI and Inflation (2/2)

- PPI computation is based on a fixed basket of products.
- Firms are the primary source of data
- Firms are selected based on the Integrated Business Establishment Survey
- Variables for the computation of PPI are weights, prices, quantities and products.
- Two reference periods for the computation of PPI are the **weight** reference (industry and product shares) and the **index** reference for price comparison.
- The computation is done from a dual time perspective, monthly and annually

# Reference Periods - PPI and Inflation

- Weight Reference-2019
  - Weight reference at the industry level is based on 2019 Gross Value Output (GVO)
  - Selection of firms is based on the Integrated Business Establishment Survey (II)
- Index Reference (Price Comparison)– March 2020 to February 2021 =100
